

CENTRAL PEST CONTROL LTD.

65 WILSON CRES. RED DEER, AB T4N 5V6
PH. 403.373.6182 - FAX 403.341.6178 - CPEST@SHAW.CA

I'd like to thank you for taking time to review our information package on Pest control services. If you should have any questions or concerns please call at any time.

Mouse Control

Hantavirus infections are associated with domestic, occupational, or recreational activities that bring humans into contact with infected rodents, usually in rural settings. Known hanta virus infections of humans occur primarily in adults. Hanta Virus cases in the United States and Canada occur throughout the year, but greater numbers are reported in spring and summer. Hantavirus infection has been epidemiologically associated with the following situations.

- increasing numbers of host rodents in human dwellings / places of work;
- occupying or cleaning previously vacant cabins or other dwellings that are actively infested with rodents;
- cleaning barns and other outbuildings;
- disturbing excreta or rodent nests around the home or workplace;
- residing in or visiting areas where substantial increases have occurred in numbers of host rodents or numbers of hantavirus-infected host rodents
- handling mice without gloves;
- keeping captive wild rodents as pets or research subjects;
- handling equipment or machinery that has been in storage;
- disturbing excreta in rodent-infested areas while hiking or camping;
- sleeping on the ground
- hand plowing or planting

Prevention

Eradicating the reservoir hosts of hanta viruses is neither feasible nor desirable because of the wide distribution of sigmodontine rodents in North America and their importance in the function of natural ecosystems. The best currently available approach for disease control and prevention is risk reduction through environmental modification and hygiene practices that deter rodents from colonizing the home and work environment, as well as safe cleanup of rodent waste and nesting materials

Insufficient information is available to provide general recommendations regarding risks and precautions for persons who work in occupations with unpredictable or incidental contact with rodents or their nesting sites. Examples of such occupations include telephone installers, maintenance workers, plumbers, oil and gas, electricians, and certain construction workers. Workers in these jobs might have to enter buildings, crawl spaces, or other sites that are potentially rodent-infested. Recommendations for such circumstances must be made on a case-by-case basis after the specific working environment has been assessed and state or local health and labor officials or trade unions and management, as appropriate, have been consulted. Determining the level of risk present and implementing appropriate protective measures is the employer's responsibility.

A well planned pest control maintenance program will minimize rodent problems.

Fly Control

The Cluster Fly is a migrating pest. These flies lay their eggs in the soil. The larvae then feed upon earth worms. With our present weather patterns, we get 3 to 4 generations of these flies per year. As we approach the winter / colder months, the flies seek out buildings to over winter. This could be places of business or your home.

Control

Twice per year outside treatments around the building along with misting inside helps control these flies. I also recommend fly traps inside for in between treatments. Sometimes there are also maintenance issues that could help. The sealing of around window and door frames will help.

Pest Control Program

Scope:

- Set up pest control program
- Set up mouse control devices (this may include traps / poison baits outside)
- Set up insect monitoring program (as required)

Pests Covered:

- mice, crawling insects
- Carpenter ants, pavement ants
- flies, gophers,skunks

Areas Covered:

- Offices, Control room, staff room, Outbuildings
- Building , wells, seperators

Monthly Service Includes;

- General cleanup and disinfect of each site as required
- Replenishing bait
- Disposal of rodents / bio degradable bags
- Air operated vacuum / hepa filter
- Mileage

Other Services;

- Remove pipe wrap / plug holes in building as required
- Fly trap service
- Odor Control
- Outside treatments
- Fly traps available - Electronic

Cluster Fly treatment

- \$250.00 per year to the monthly service above.

Thanks,
Wendell A Jones
